TBTS delivers a range of services to the beef industry in Northern Australia.

Mission Statement
To provide the northern beef industry with hands-on technical support to improve the understanding and uptake of BREEDPLAN and related genetic technologies.

Technical Support
- **Individual Producer Support**: Beef producers are able to access technical support regarding any of the genetic technologies available. This support is in the form of both phone and email consultation supplemented by farm visits.
- **On-Property Support**: On-farm visits are available for seedstock producers with specific queries and needs. The on-farm visits provide a valuable opportunity for beef producers to gain advice regarding issues that are relevant to their individual operation.
- **Council/Board Support**: Technical liaison is provided to the Councils and Technical Committees of the 9 participating breeds.
- **Service Provider Support**: Technical assistance is also available to other service providers in the beef industry such as stock agents, ultrasound scanners and cattle veterinarians.

Workshops & Webinars
Workshops/Webinars are regularly conducted to give members of the beef industry the opportunity for tuition in the fundamentals of the different genetic technologies that are available. Workshops/Webinars are developed to cover the Seedstock and Commercial cattle sectors. Upcoming Workshop/Webinar details can be accessed from the TBTS website.
